Introduction

- Medical Paramedical Staff have 4
 Fundamental responsibilities followed below,
- ✓ Promotion of Health
- ✓ Prevention of illness
- ✓ Restoration of Health
- ✓ Alleviation of Suffering

Introduction

- Two phases of Disease are
- √(i) Pre Pathogenesis &
- √(ii) Pathogenesis

Definition of Disease 3 Prevention

 "Activities designed to protect patients or other members of the public from actual or potential health threats and their harmful consequences."

OR

 "Prevention is the action aimed at eradicating, eliminating or minimizing the impact of disease and disability."

Levels of Prevention

- 1) Primordial Prevention
- 2) Primary Prevention
- 3) Secondary Prevention
- 4) Tertiary Prevention

Level of Prevention

Prevent the development of risk factors

Primordial Prevention Onset of disease

Clinical diagnosis

No disease

Asymptomatic disease

Clinical course

Primary Prevention

Manage the risk factors. Prevent the

Secondary Prevention

Early diagnosis & prompt treatment.

Tertiary Prevention

Reduce complication &

Prevention is better Than Cure...!

1) Primordial Prevention

- "This is a prevention of Development of risk Factors in a Population group , which they have not yet appeared."
- Special Attention is Given in preventing Chronic Disease.

1) Primordial Prevention

- Main Intervention is Health Education.
- In this efforts are dedicated towards
 Discouraging people from adopting
 Harmful Life styles/Habits through
 Individual & Mass Education.

 Primordial prevention, a relatively new concept, is receiving special attention in the prevention of chronic diseases. Ex., many adult health problems (e.g. obesity, hypertension) have their early origins in childhood, because this is the time when lifestyles are formed(Ex., smoking, eating patterns, physical exercise).

 Primordial prevention begins in childhood when health risk behavior begins. Parents, teachers and peer groups are important in imparting health education to children.

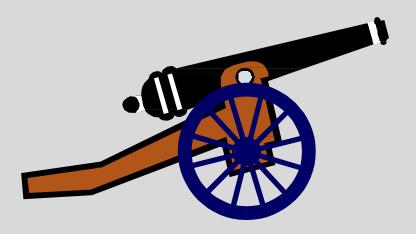

Examples of Primordial prevention

3)115

- □ National programs and policies on:
- Food and nutrition
- Comprehensive Policies for discourage smoking, Alcohol & Drugs
- To promote regular physical activity
- Making major changes in lifestyle

Lifestyle Factors

"Genes load the gun. Lifestyle pulls the trigger"

Dr. Elliot Joslin

2) Primary Prevention

 "Primary prevention can be defined as the action taken prior to the onset of disease, which removes the possibility that the disease will ever occur."

2) Primary Prevention

- In this Action are taken before the onset of Disease.
- It signifies intervention in the prepathogenesis phase of a disease or health problem.

It includes the concept of "positive health", a
concept that encourages achievement and
maintenance of "an acceptable level of health
that will enable every individual to lead a
socially and economically productive life".

Primary Prevention

Achieved by

Achieved by

Health promotion

- Health education
- Environmental modifications
- Nutritional interventions
- Life style and behavioral changes

Specific protection

- Immunization and seroprophylaxis
- chemoprophylaxis
 - Use of specific nutrients or supplementations
 - Safety of drugs and foods
 - Control of environmental hazards, e.g. air pollution

Approaches for Primary Prevention:

 The WHO has recommended the following approaches for the primary prevention of chronic diseases where the risk factors are established:

- A) Population (mass) strategy
- B) High -risk strategy

A)Population (mass) strategy

- "Population strategy" is directed at the whole population irrespective of individual risk levels.
- The population approach is directed towards socio-economic, behavioral and lifestyle changes

A)Population (mass) strategy

 For example, studies have shown that even a small reduction in the average blood pressure or serum cholesterol of a produce a population would large reduction in the incidence of cardiovascular disease.

B) High -risk strategy:

- The high -risk strategy aims to bring preventive care to individuals at special risk.
- This requires detection of individuals at high risk by the optimum use of clinical methods.

B) High -risk strategy:

 Primary prevention is a "Holistic" approach which relies on the measures taken to Promote Health.

(i).Health Promotion

(ii). Specific Protection

(i). Health Promotion

• "It is the process of enabling people to increase control over the determinants of health and thereby improve their health".

OR

 " Health Promotion is directed towards Strengthening the Host."

OR

 Process of enabling people to increase control over and to improve health

 Main Aims of Health promotion is To enable people to increase control over Health & To Improve the Over all Health.

- There Aim can be achieved by the following Intervention:
- > Health Education
- > Environmental Modification
- > Behavioral Changes
- ➤ Life Style change
- > Nutritional Intervention

 Health education to improve healthy habits and health consciousness in the community.

 Improvement in nutritional standards of the community.

.

- Healthful physical environment (Housing, water supply, excreta disposal etc.,)
- Good working condition

 Periodic Selective examination of risk population.

 " Efforts directed toward protection against specific diseases."

OR

 "The provision of Conditions for normal Mental & Physical Functioning of the Human beings & in Group. It includes the Promotion of Health, Prevention of Sickness, & Care of Individuals."

Intervention

- Immunization
- Use of specific nutrients
- Chemoprophylaxis
- Protection against occupational hazards
- Protection against accidents
- Control of General Environment
- Avoidance of allergens etc.

- Use of Specific immunization (BCG, DPT,MMR vaccines)
- Chemoprophylaxis (tetracycline for Cholera, dapsone for Leprosy, Chloroquine for malaria,etc.,)
- Use of specific nutrients (vitamin A for Children, iron folic acid tablets for Pregnant mothers)

.

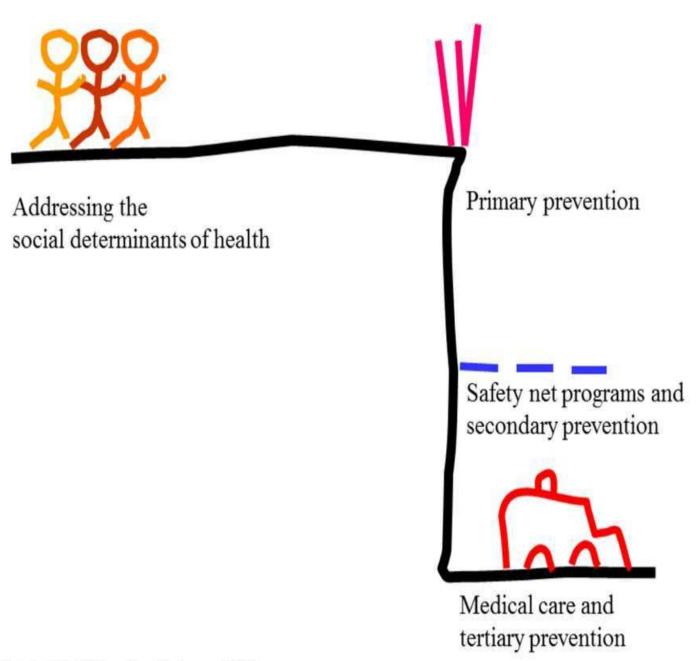

- Protection against accidents (Use of helmet, seatbelt, etc.,)
- Protection against occupational hazards.
- Avoidance of allergens.
- Protection from air pollution.

Key To Remember

```
Primary = Prevention
Secondary = Screening
Tertiary = Treatment
```

Q.1: The local hospital offers Yearly cholesterol screenings to the public?

Secondary Prevention

Q.2: A Community HealthWorker provides vaccine to clients in an immunization

clinic?

Primary prevention

☐ Mr. Rushi is referred to a cardiac rehabilitation program after Coronary artery bypass surgery?

Tertiary Prevention

Thank You
